

# **EW Solutions Data Management Methodologies**

## **Methodologies Overview**

Provides a short description of the methodologies EW Solutions offers in metadata management, data warehousing / business intelligence / advanced analytics, and in data governance / data stewardship for any organization

**EW Solutions**  
**9/22/2017**

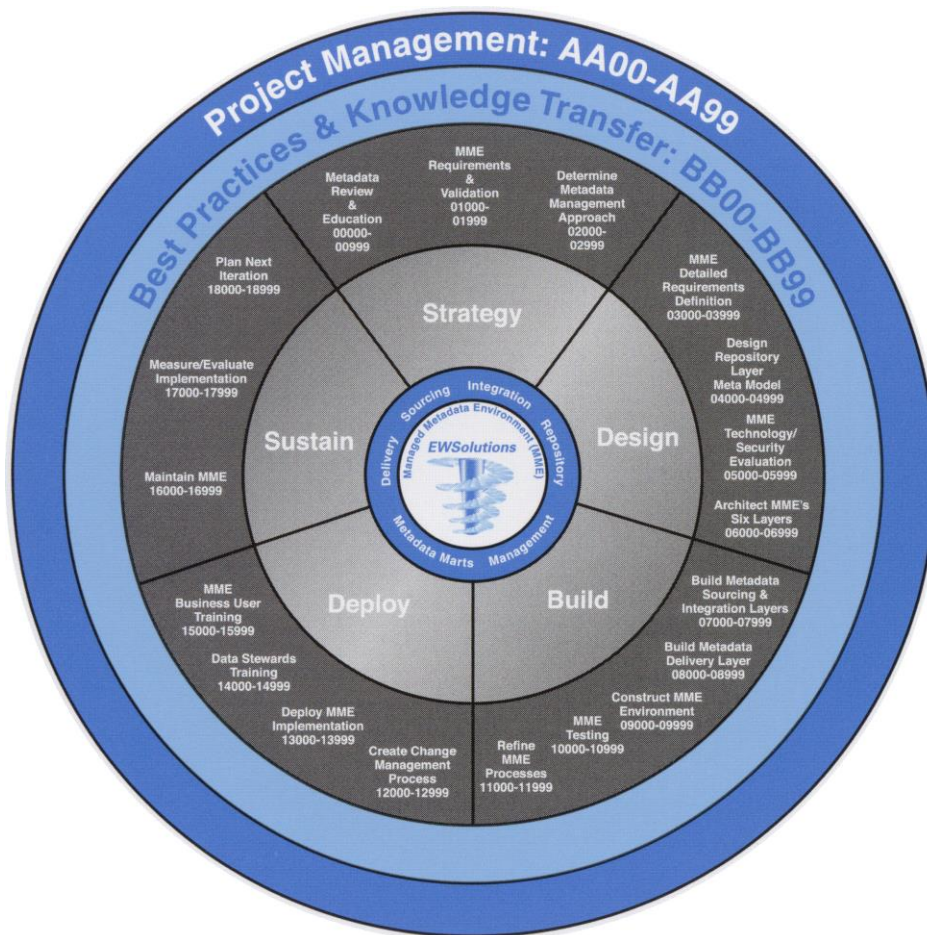

## Revolutionary Methodologies

EW Solutions has created the first vendor independent, comprehensive implementation methodologies in the industry. Our revolutionary methodologies provide a standardized, documented, and industry tested foundation for any data management initiative.

- Metadata Management M3<sup>sm</sup>
- Data Warehousing / Business Intelligence (DW/BI) I3<sup>sm</sup>
- Data Governance & Data Stewardship G3<sup>sm</sup>

These iterative methodologies leverage thousands of hours of real-world experience and best practices from the most demanding client environments. All the methodologies are flexible and scalable for any environment across both commercial and government organizations.

EW Solutions' unique cookbook approach allows you to select the necessary best practices in each stage for your implementation, adjusting the methodology to fit your needs while maintaining best practices and proven techniques.

## Characteristics of EWSolutions' Methodologies

**COST EFFECTIVE:** Organizations can save approximately 92% by purchasing one of EWSolutions' methodologies instead of a competitor's. Research shows that organizations that attempt to implement metadata management, data warehousing / BI, or data governance without using a methodology incur an 83% project failure rate.

**FIELD PROVEN** - successful implementations have used EWSolutions' methodologies since 2003 with over 100 client partners in metadata management, data warehousing / business intelligence / advanced analytics, and data governance / data stewardship.

**COMPREHENSIVE AND CUSTOMIZABLE** – EWSolutions' methodologies are the only fully defined, comprehensive, flexible implementation methods starting with strategy, through design, development, deployment, and sustainment. For each domain (metadata, data warehousing/ business intelligence / advanced analytics, data governance / data stewardship), there are over 100 narratives with detailed activities; an additional 90 artifacts, project plans, example templates, etc....; 100% adaptable and customizable to any organization

## Structure of EWSolutions' Methodologies

### Phases (I – V)

Phases are comprised of distinct activities

### Activities (grouping of work)

Best practices and knowledge transfer

### Task Narratives (description of work)

Each activity has one or more narratives associated with it

### Templates (specific deliverables)

Templates are assigned to narratives

## Important Points about EWSolutions' Methodologies

- **Metadata Management M3<sup>sm</sup>**: only full metadata management methodology, vendor-neutral, focus encompasses strategic view with tactical implementation. Enables business metadata, technical metadata, metadata storage, alignment with data governance and data integration
- **Data Warehousing / Business Intelligence (DW/BI) I3<sup>sm</sup>**: vendor-neutral, fully enabled methodology for business intelligence and advanced analytics. Provides a complete approach to decision-based data management, for business intelligence, reporting, analytics, etc. Includes project plans for a variety of approaches.
- **Data Governance and Data Stewardship G3<sup>sm</sup>**: only vendor-neutral, full service methodology that incorporates all aspects of data governance (planning, design, development, implementation, sustainment) with a fully functional data stewardship component. Enables any organization to create, manage, and maintain data governance with or without data stewardship for maximum flexibility.

## Contact EWSolutions' to Discuss Methodologies

Contact EWSolutions to learn more about how one or more of these revolutionary data management methodologies can support your organization with faster, more cost-effective, complete approaches to designing, developing, implementing, sustaining proven practices in:

- Metadata Management M3<sup>sm</sup>
- Data Warehousing / Business Intelligence (DW/BI) I3<sup>sm</sup>
- Data Governance & Data Stewardship G3<sup>sm</sup>
