Bringing Enterprise Data Management Education and Testing Online and On-Demand: A Case Study in How EWSolutions Enabled an Organization to Offer Self-Paced Training in Data Management

A major Fortune 500 organization recently acquired a large competitor in their marketplace. As part of the acquisition, they identified a need to incorporate its small but effective enterprise data management initiative into their environment. At the same time, external forces were indicating a need to expand the data management program to be truly enterprise, which would require educating many more staff members and leaders in the concepts and best practices of data management. With an organization size approaching multiple thousands, the company knew it could not remain with its current approach of a few small in-person classes held once or twice each year.

The organization had a focus on a few areas of the [DAMA-DMBOK®](#) framework (metadata management, limited data governance, some data quality programs, enterprise data modeling, and a data warehouse) but they had chosen to adopt a full enterprise data management approach with this acquisition. This commitment forced the organization to re-evaluate its training in all areas of data management, as well as the delivery methods. New curriculum as well as a new platform were needed to address this situation.

Education requirements identify need for change

The need for a comprehensive change to the organization's enterprise data management education and its delivery method forced the company to realize it simply could not update its existing training material. Many staff had outdated knowledge and had adopted a collection of practices that were yielding limited results. Since the company's data management program had been scattered, it did not have a focus on the underlying enterprise information management challenges of data architecture, full metadata management, enterprise data governance, or master and reference data management. Additionally, the warehousing and business intelligence environment was not built with proven practices and industry standards for data integration, data warehouse architecture and data warehouse metadata management, ultimately causing challenges for the expanding organization.

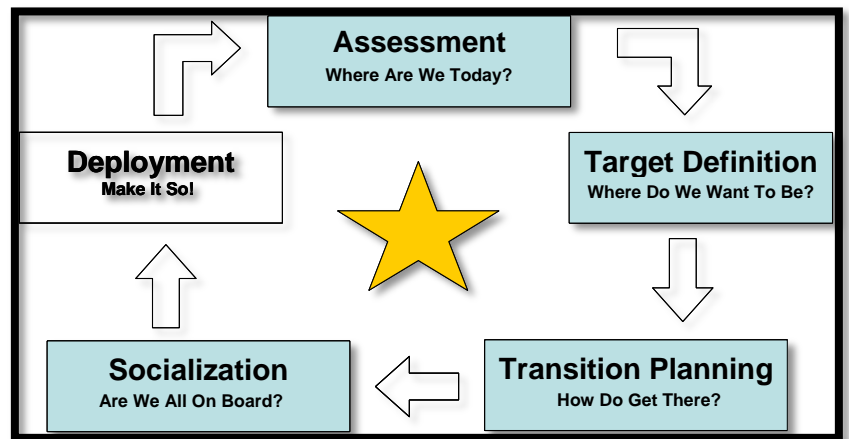

The company retained industry leader [Enterprise Warehouse Solutions](#) (EWSolutions) and used its expert consultants to perform a complete enterprise information management current state assessment, and a companion education assessment. EWSolutions' team of experienced top-level strategists was able to provide

the company with exemplary advice, guidance, planning and execution strategies and recommendations for improvement in all areas of EIM (data governance, master and reference data management, data architecture, metadata management, data integration, data quality management, data security, database operations, etc). EWSolutions also performed a comprehensive assessment for the data management education at the company concurrently with the EIM assessment. This assessment included a detailed review of the training content, and the delivery methods used, and a gap assessment of knowledge and skills in each area of data management against the DAMA-DMBOK© framework.

During the education assessment, EWSolutions used its revolutionary educational assessment framework to evaluate, design, and implement the processes of the education strategy and roadmap.

The results of the education assessment included:

- Analysis of current education content against DAMA-DMBOK© framework activities and practices
- Assessment of gaps between the client's data management management practices and industry proven practices DAMA-DMBOK©
- Assessment of the current delivery method for training and recommendations for improvements that incorporated current technologies, best training and learning practices, and adult education concepts
- Identification of skills and knowledge gaps for each area of the DAMA-DMBOK© framework to create appropriate training materials, and creation of examinations to validate skills and knowledge acquisition

EWSolutions consultants brought outstanding credentials and dedication to the partnership while also offering:

- Exceptional experience in all facets of enterprise data / information management assessment and implementation
- Exceptional experience in all areas of educational assessment, Learning Management System (LMS) development and implementation, training material development, training delivery
- Exceptional experience in all areas of enterprise data management training development and delivery
- Sophisticated interpersonal communication skill for delivering knowledge transfer
- Thorough understanding of the management of educational platforms to support client's student / training populations
- The invaluable ability to view the technology from the business person's perspective

With the superior guidance of EWSolutions in EIM and educational assessment, with clearly defined recommendations for improvement and a series of phased implementation roadmaps, the company was able to plan its new approach to data management and the education of its staff confidently with these clearly defined goals:

1. Plan for full enterprise data management and implement the plan
2. Establish the foundations of enterprise data management through phased education
3. Improve the current state of the organization's data management education
4. Expand the availability of data management training to online and on-demand
5. Develop a robust, skills and knowledge based curriculum for data management to be available to the organization

Upon completion of the assessments, EWSolutions was retained to guide and staff the development of the EDM education at this organization. The company used its existing Training Director as the leader, and EWSolutions provided a senior resource to support this person, offering guidance and implementation capabilities. The company and EWSolutions implemented the LMS and created a collection of courses and examinations for all areas of enterprise data management (data governance, metadata management, data architecture / data modeling, data quality, DW/BI/analytics, data security, MDM, etc.). In addition, an EWSolutions Principal Consultant served as the initial LMS Administrator, designing and implementing the company's student data portal that collects data on courses taken and passed, tracks followed, etc. The company hired a full time LMS Administrator and this person eventually replaced the consultant.

Using senior resources from EWSolutions, the company was able to meet all the defined goals in the specified period.

EWSolutions Overview

[Enterprise Warehouse Solutions](#) (EWSolutions) is a consultancy with superior strategic and tactical planning analysts who offer government and commercial clients innovative and authoritative solutions. EWSolutions delivers assessments / strategies in all areas of enterprise data / information management, technology implementation in metadata management, data warehousing (ETL, BI, data and text mining, etc.), business intelligence implementation, data governance program development and implementation, enterprise data management framework development and implementation, data migration planning, disaster and contingency planning, and strategic solutions for business/technology issues. Additionally, EWSolutions offers a complete education and training program in all areas of enterprise data / information management; services include program assessment, program development, training platform selection and implementation, and related activities. The company's extensive client base spans the government and the health, life sciences, insurance, financial services, consumer products, retail, manufacturing, and high-tech industries.
